

### Objectives:

Using the **ORDER OF OPERATIONS** applet, the student will simplify expressions using the order of operations.

### Functionality:

When the student presses **START**, the **ORDER OF OPERATIONS NOTE** will be displayed.

**IEWS** allows the student to select a new problem, enter the answer to the problem, see the steps involved in solving the problem, or to view the problem again.

**New Problem** will display a problem for the student to solve. The problems will be randomly generated.

**Guess** prompts the student to enter the answer.

Information concerning the answer will be displayed in a message box. **EXCELLENT!** appears when the student is correct. If the answer is incorrect, the message box will display **TOO LOW TRY AGAIN** or **TOO HIGH TRY AGAIN**.

**Show Steps** will show the steps involved in solving this problem. Press any key to see the next step.

**See Problem** will display the problem again if needed.

### Additional Exploration:

From the **HOME** screen, evaluate the following expression given A=-1, B=2, C=2, D=3, and E=-5. (Highlight the expression and **SHOW** to see algebraic form.)
